Electra Elite[®] IPK Advance

***Delivers productivity and
versatility to your business***

EE IPK Advance the right technology, the right choice

It's about choice and **EE IPK Advance** offers what is best for you and your business requirements. If a complete IP solution is required, then **EE IPK Advance** will provide full-blown peer to peer IP telephony. And unlike the inflexibility of early IP packages, it can also install as a traditional phone system.

EE IPK Advance is your choice

Voice Over Internet Protocol (VoIP) - IP Telephony

VoIP is a term used in IP telephony for sending voice information in digital form by using the Internet Protocol (IP) instead of the traditional circuit committed protocols of the public switched telephone network (PSTN). One of the key benefits of VoIP and internet telephony is that it avoids the tolls charged by ordinary telephone service.

Flexibility

EE IPK Advance offers you the flexibility and freedom to implement at a pace that suits your company. You can mix and match **EE IPK Advance** IP phones with normal, analogues phones. Alternatively, you can install **EE IPK Advance** with IP phones plugging into your IP network and use wireless LAN.

Cost Effective

EE IPK Advance VoIP capability allows you to place voice calls over the data network. VoIP reduces long distance charges by using IP to connect multiple office locations and even countries. You will save in maintaining your system as you only maintain one network of voice and data with **EE IPK Advance** compare to two separate networks of voice and data in traditional phone system.

Total Investment Protected

As **EE IPK Advance** lets you enjoy both traditional phone system and IP you will need to change your traditional phone system when you migrate to IP phone system. Your investment today is protected tomorrow.

Seamless IP Migration

Seamlessly upgrades the Corporate Network

Combination of TDM, and IP telephone are possible to exist in a single system. IP migration is completely matching with user will.

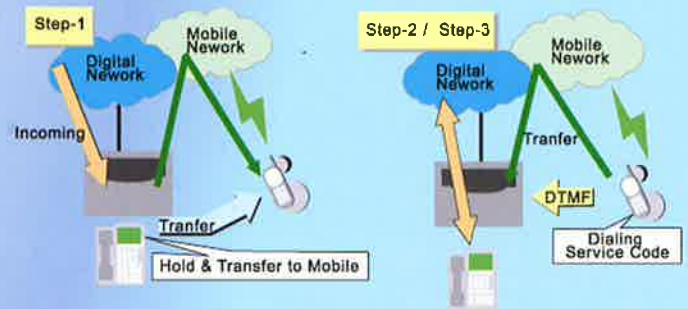

1. Traditional TDM
 Legacy system in first Phase.

2. Combined Terminals
 Making part of extension IP at staff increase, or layout changes. Still keeping terminal operation as same.

Mobile Extension

EE IPK Advance allows you to simulate mobile phone user to Internal extension, and allows to control Hold & Transfer operation by DTMF Signaling (under ISDN platform).
